

一、 Usage Methods:

1. Login

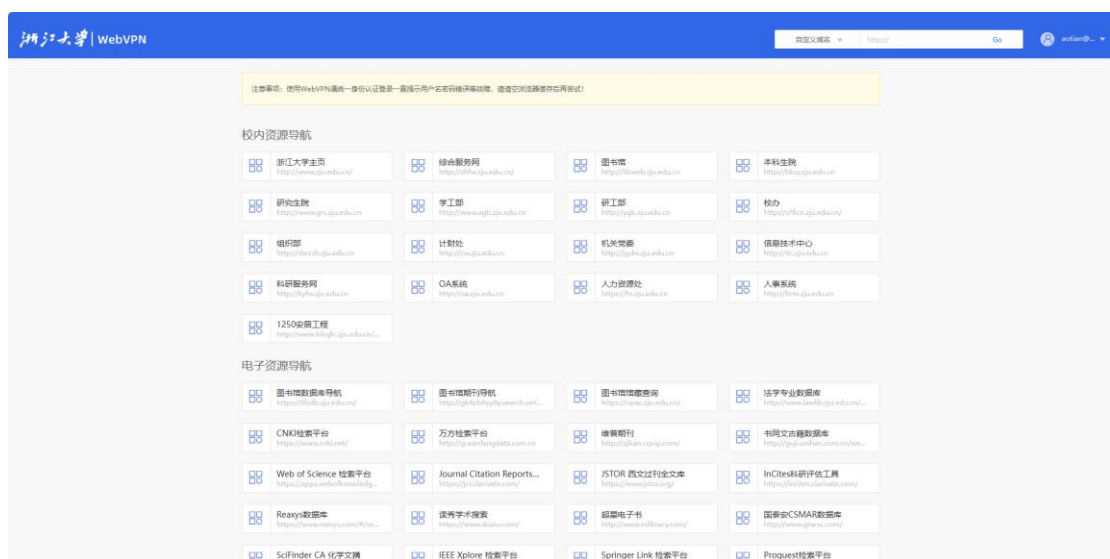

- Enter the Zhejiang University WebVPN URL (<https://webvpn.zju.edu.cn>) in your browser. On the login page, enter your Internet account and password, then click Login.

- Note: Accessing on-campus web pages or library electronic resources (web-based sites) via WebVPN does not require installing a client or plugin. It supports direct use on computers, phones, and tablets. It does not support non-Web protocol applications, such as: Remote Desktop, FTP, etc.

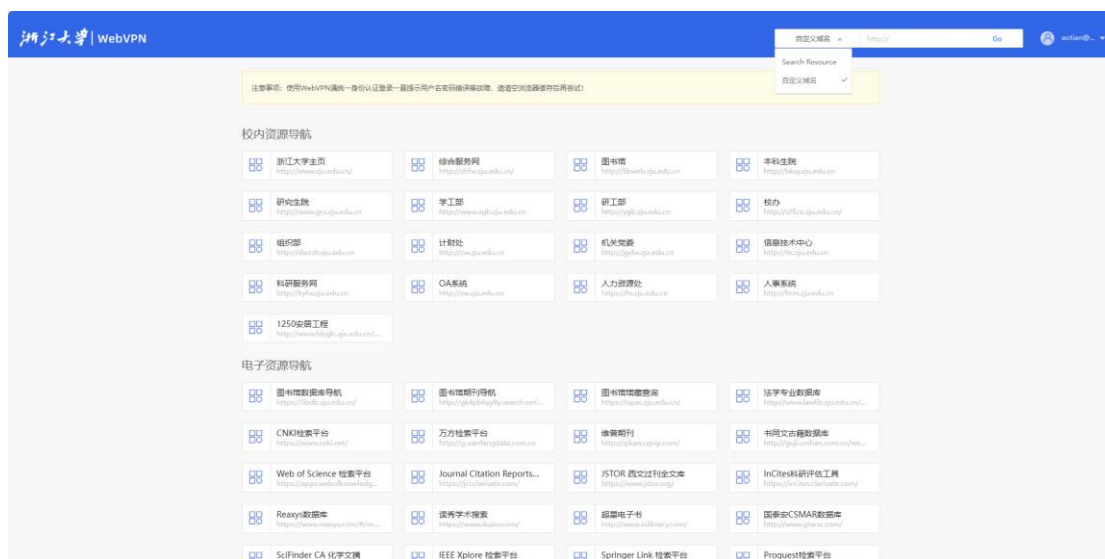

2. Resource Access

- Zhejiang University WebVPN provides resource modules including On-Campus Resources, Electronic Resources (database resources), and Network Tools.
- Users can click on the corresponding resources to access them based on their needs.
- Database resources not listed can be accessed by clicking through to the respective database resource via the Library Database Navigation page.

3. Custom Access

- If the resource you need to access is not listed in the resource list, you can access it by entering the domain name in the specified location.

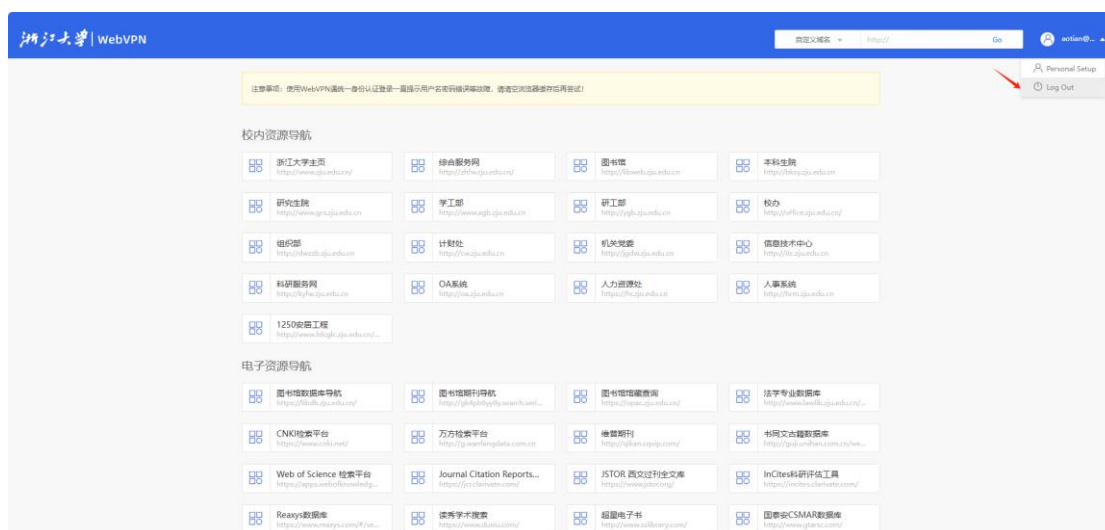

- Select "Full Network Resources" (全网资源), enter the corresponding website URL, and click "Go Immediately" (立即前往).
- **Important: WebVPN does not support** directly entering the target resource's domain name in the browser's address bar. All resources accessed through WebVPN **must** use the domain suffix *.webvpn.zju.edu.cn. For example, to access the Comprehensive Service Portal (Zhfw), the domain becomes: <http://zhfw-zju-edu-cn.webvpn.zju.edu.cn:8001>.

4. Logout

- After finishing using WebVPN to access on-campus resources, please promptly click "Logout" (注销) in the top right corner to exit the system. This helps protect your personal

account security and releases system resources.

二、 Important Notes:

1. The WebVPN system **does not support** directly entering the target resource's domain name in the browser address bar. Resources must be accessed via the "Resource Links" provided on the resource navigation page, or by navigating from an existing resource page.
2. **Do not run both RVPN and WebVPN simultaneously on the same terminal device**, as this may cause access failures.
3. Accessing database resources via WebVPN must comply with the relevant regulations of the **"Zhejiang University Library Electronic Resources Usage Management Measures (Provisional)"**. Users who violate the rules for electronic resource usage will be dealt with according to the relevant regulations.
